

Overview

Bank

Banks are used to organise patterns and are the highest level of order in the T-1 structure. T-1 has a total of 16 Banks which operate like folders, each bank storing up to 16 patterns.

Patterns & Tracks

Patterns control sequencing and contain a set of steps. Tracks control the musical part and the final output. Tracks can be set to control note information, MIDI CC - Control Change messages and FX for incoming MIDI. Patterns can be changed or chained in series to create a full song arrangement. Each Pattern hosts 16 tracks.

Steps

Steps are assembled into a pattern to trigger a note or event in the sequence.

Cycles

Cycles is the name given to a feature that groups combinations of parameter settings that are applied on each loop of the track sequence. This allows each Euclidean cycle to have a unique set of automated parameter values applied when each cycle of the sequence is active. Each track holds 16 cycles.

User Interface

Knobs - 18 Rotary / Press Knobs

Every knob holds a function for shaping the composition of the active track. When a knob is pressed down, the 16 [VALUE] buttons show the value of the current knob, which is changed by either turning the knob itself or pressing the buttons. Every knob can be double-tapped for hold and the BANK button can be used to exit to the default view.

-  Indicates turning a rotary knob
-  Press / Hold a rotary knob
-  Double Tap a rotary knob

Buttons - 16 x Value Pad Buttons

The 16 buttons named [VBx] have multiple purposes. By default, The Value buttons represent 16 tracks [VB1] - [VB16] and in this view, the buttons are for selecting the active track. The active track(s) is lit in ORANGE and indicates that editing on the knobs is available. The 16 tracks can also represent Patterns, Banks, or Mute stages if you press and hold either [PATTERN], [BANK] or [MUTE] button.

-  Indicates a [VALUE] Button

Buttons - 7 x General Pad Buttons

The seven buttons in the lower right are used for editing, transport functions, and performing on-the-fly variations suitable for live performances. Holding [CTRL] Button gives access to the secondary functions labeled on the front panel.

-  General function pad

Shape

Used to build and layer rhythmic patterns, create movement and adjust voicing.

- 1** Steps
Euclidean pattern generator - number of steps. Number of steps determine length of a cycle.
- 2** Pulses / Rotate
Euclidean pattern generator - number of note pulses. Secondary function rotates all notes. Notes can also be placed manually to the step sequencer.
- 3** Cycles
Sets the parameter automation per cycle. A cycle contains a setting for each of T-1 parameters.
- 4** Division
Clock divider for the time interval value of each step of the pattern.
- 5** Repeats / Offset
Number of note repeats added after each pulse. Secondary function applies velocity ramp for repeats.
- 6** Time / Pace
Adjusts time interval of the note repeats. Secondary function adjusts repeat acceleration / deceleration in a 'bouncing ball' style effect.
- 7** Voicing / Style
Adjusts the pitch order of inserted notes, similar to an arpeggiator. Secondary option for the voicing style.
- 8** Range / Phrase
Modulates pitch of notes using the LFO or cadence shapes. Secondary function selects modulation shape.

Groove

Applies timing and rhythmic feel

- 9** Velocity / Probability
Base velocity of notes. Secondary function adjusts the note filter based on a chance.
- 10** Sustain
Note length adjustment.
- 11** Accent / Groove
Adds amount of velocity variation to notes. Secondary option selects the velocity groove character.
- 12** Timing / Delay
Microtiming operates like a classical swing function. Asymmetrical stretch across the beat grid. Secondary function introduces a +/- track 'delay' offset.

Tonal

Pitch and scales

- 13** Pitch / Harmony
Chooses pitches in a keyboard style application and transposition of notes. Secondary function for harmonic transposition.
- 14** Scale / Root
Scale of the track. Secondary function sets the root note.

Setup

General MIDI and track configuration

- 15** Length / Quantize
Adjusts the step length of the active track, set to infinite by default. Secondary function for quantization of current pattern with respect to transport.
- 16** Tempo
Project tempo from 24bpm - 280bpm, default 120bpm.
- 17** Channel / Output
MIDI Channel between 1-16. Secondary function sets the routing of transmitted notes to other tracks
- 18** Random / Rate
Randomization by turning other parameter knobs when Random held. Turn Random for amount. Secondary option for length and division of modulation curve.

MIDI Gear Setup

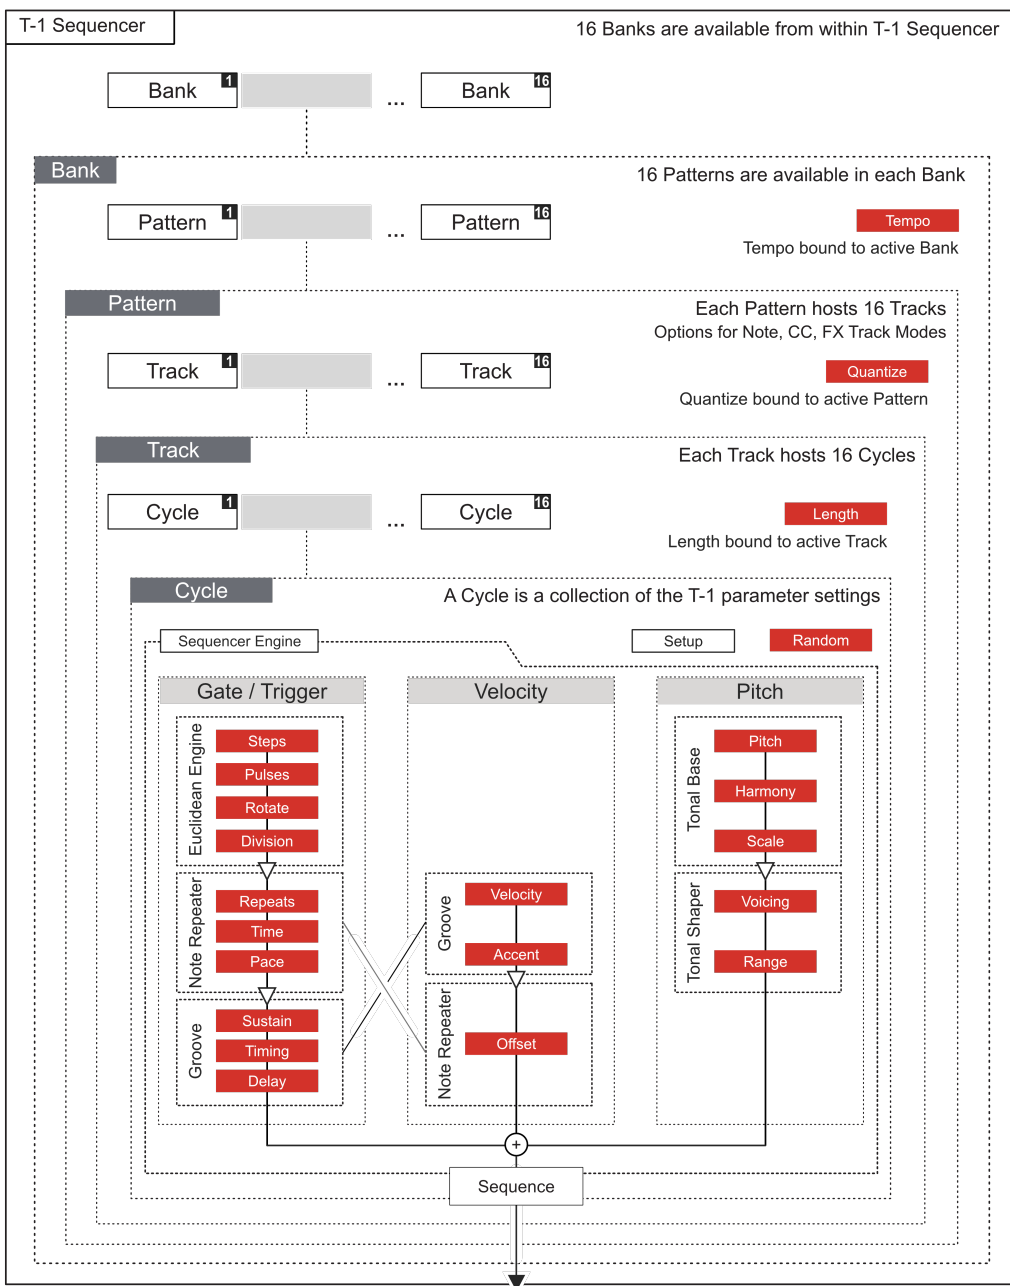

Turn (CHANNEL) to assign a MIDI Channel to the selected Track

MIDI can be connected via the USB connection but this must also deliver power to the T-1

For configuration of CV, Gate, Sync Input and Outputs a Torso App is available for T-1.

Architecture

General Function Buttons

Ctrl Button

Use together with other buttons to access the secondary function.

Example: [CTRL] + [SAVE] on Bank Button

Play / Stop Button

- Stop and Start playback of the sequencer transport.
- Press [PLAY] button to play or stop the pattern. The button will flash white every quarter note when playing. Button is orange if a Link session is connected and synchronised.
 - Press [CTRL] + [PLAY] excludes MIDI devices, Link send and analog reset commands.
 - Hold [CLEAR] + [PLAY] to kill any stuck MIDI notes.

Bank / Save Button

- Select 1 of 16 banks. Various Save actions with secondary option.
- Hold [BANK] + [VBx] to select 1 of 16 available banks. Active bank is white.
 - Hold [CTRL] + [BANK] + [VBx] to save the bank to a slot.

Bank also has a special backup function. Press to [BANK] return to T-1 'Home' page.

Pattern / Select Button

- Select 1 of 16 Patterns from within the current bank.
- Hold [PATTERN] + [VBx].
 - Hold [CTRL] + [SELECT] + [VBx] to select pattern without playing.

Clear / Copy Button

- Copy to / Paste from clipboard using Copy/Clear. Clear clipboard.
- Example: Copy Pattern to clipboard. Hold [CTRL] + [COPY] + Tap the [VBx] for source pattern.
 - Example: Paste Parameter from clipboard. Hold [CLEAR] + [VBx] for destination pattern.
 - Press [CLEAR] to clear clipboard.

Mute Performance Button

- Mutes one or more tracks.
- Hold [MUTE] + [VBx], then release to silence the selected tracks.
 - Hold [CTRL] + [MUTE] + [VBx] to silence the selected tracks instantly.

Temp Performance Button

- Temporarily applies parameter changes for note and CC tracks.
- Select tracks to edit [VBx]
 - Hold [TEMP] + Turn (Knob) to temporarily change track parameter.
 - Hold [TEMP] + [PATTERN] + Turn (Knob) to make relative parameter changes to all tracks.
 - Release [Temp] to restore values.

Quick Reference Guide

Length

- Reduce Set Length** Turn (LENGTH)
- Random Start** [CLEAR]
- Random Start / Length** [CLEAR] + Turn (LENGTH)

Note Timing

- Swing** Turn (TIMING)
- Delay** [CTRL] + Turn (DELAY)

Repeats

- Add Repeats** Turn (REPEATS)
- Choke on new note** Hold (REPEATS) + [VB8]
- Tail - overlay notes** Hold (REPEATS) + [VB16]
- Repeat Division Time** Turn (TIME)
- Velocity Ramp** [CTRL] + Turn (OFFSET)
- Pace Acceleration** [CTRL] + Turn (PACE)

Cycles

- Select Cycle to Edit** Press [VBx]
- Adjust Number of Cycles** Turn (CYCLES)
- Clear Cycle** [CLEAR] + [VBx]
- Exit Cycles Edit Mode** Press [BANK]

Probability

- Chance of notes opted out** [CTRL] + Turn (PROBABILITY)

Channel

- Select Channels** Hold (CHANNEL) + [VBx]
- Use [CTRL] + (CHANNEL) to route MIDI to tracks.

Accent

- Accent Amount** Turn (ACCENT)
 - Groove** Hold (GROOVE) + [VBx]
 - Groove Profile** [CTRL] + Turn (GROOVE)
- Groove Profile Template
- | | | | | | | | |
|-------|----------|--------|-------|--|--|--|----|
| Agogo | Timbales | Congas | Bongo | | | | |
| Saw | Triangle | Sine | Pulse | | | | CV |
- Accent
- Amount of Velocity profile applied

Pitch

- Insert Notes** Hold (PITCH) + [VBx] Using Keyboard
 - Transpose** Turn (PITCH)
 - Scale** Hold (SCALE) + [VBx]
 - Root Note** [CTRL] + Turn (ROOT)
 - Harmony** Turn (HARMONY)
 - Voicing Amt** Turn (VOICING)
 - Style Template** [CTRL] + Hold (STYLE) + [VBx]
- Style Profile Template
- | | | | | | | | |
|------------|-----------|------------|--|--|--|--|--|
| Poly Fixed | Poly Ramp | Poly Climb | | | | | |
| Mono Fixed | Mono Ramp | Mono Climb | | | | | |
- Voicing
- Amount of style profile applied

- Range** Turn (RANGE)
 - Phrase** [CTRL] + Hold (PHRASE) + [VBx]
- Phrase Profile Template
- | | | | | | | | |
|-------|-------|-------|-------|--|--|--|----|
| Cad 1 | Cad 2 | Cad 3 | Cad 4 | | | | |
| Saw | Tri | Sine | Pulse | | | | CV |
- Range
- Note range applied

Temp

- Temporary 'On-The-Fly' Edits** [TEMP] + Turn (Parameter)
- Edits are reset when Temp is released

The 16 Value button pads, VBx, illuminate in colour to represent the current function or parameter value. This is normally visible when function or parameter is held. To lock the displayed value, double tap the parameter or function button.
